Leading performance

Orbitrap Exploris 240 mass spectrometer

The Thermo Scientific™ Orbitrap Exploris™ 240 mass spectrometer provides leading performance and application versatility to drive discovery and identification, with the quantitative precision and accuracy to confidently scale up to achieve impact.

From small- to large-molecule analyses, you'll enjoy the power of leading performance with the Thermo Scientific™ Orbitrap Exploris™ 240 mass spectrometer.

Designed into our fourth-generation quadrupole-Orbitrap mass spectrometer, the Exploris™ 240 delivers the performance and versatility needed to drive discovery and identification with the quantitative precision and accuracy to confidently scale up while achieving impact.

Operational simplicity with intelligent data acquisition helps you discover your fast track to confident results across a range of applications.

Using proven Thermo Scientific™ Orbitrap™ mass analyzer technology, with more than twenty years of experience, you can address any challenge and achieve your objectives with excellence.

Regardless of your application and sample complexity, the Orbitrap Exploris 240 mass spectrometer provides the highest-quality, intelligently collected high-resolution, accurate-mass (HRAM) MS data to confidently power your science.

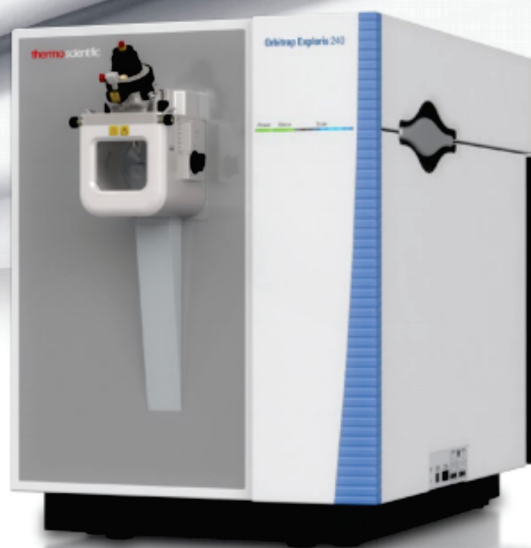

The sensitivity, versatility, and operational simplicity of the Orbitrap Exploris 240 mass spectrometer empowers you to take discoveries beyond identification to link complex biological function with trusted, best-in-class relative and targeted quantitation.

With superb spectral clarity, the Orbitrap Exploris 240 mass spectrometer delivers the high-confidence characterization required to reliably quantitate and identify biotherapeutics in both research and routine laboratory environments

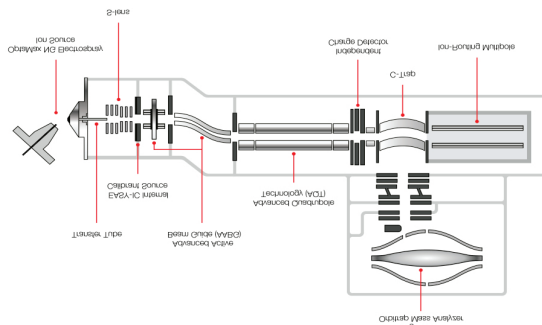

Operational simplicity, together with intelligent data acquisition, fast tracks you to confident results.

With Thermo Scientific™ AcquireX™ intelligent data acquisition workflow to collect more meaningful data, the Orbitrap Exploris 240 mass spectrometer redefines versatility and time-to-results for both small- and large-scale studies, day after day.
